Cyscale

Cloud Security
Wrapped 2023

Cyscale

In 2023, we helped reduce our customers' cloud security risk by 16% on average

One customer even saw **a reduction of 70%**

Good job!

Cloud adoption knows no bounds, and 2023 has been a world tour for Cyscale, with **new customers as far afield as UK, USA, Romania, India, and South America**

Cyscale

Data security was clearly high on the agenda this year

Buckets were **the most affected cloud resource** — triggering the majority of high-severity alerts in the Cyscale platform

And **the most common misconfiguration we fixed** was "Ensure buckets have versioning enabled"

Showing that our customers want to **maintain full control** over their precious data

Cyscale

We saved customers weeks fixing top issues

Without Cyscale, CTOs and CISOs spent up to two weeks gathering and analyzing configuration data to produce a risk assessment and list of manually prioritized tasks

With Cyscale, cloud estates were onboarded and scanned **in 15 minutes** and task prioritization **is performed in real-time**

Cyscale

Oh yes, **Super Tuesdays are a thing**. Our customers clearly like to get the work done at the start of the week

The most productive day was a Tuesday with 4834 findings resolved

Cyscale

That's a wrap!
